[Commenter 4]'s title

1. REC rollover and redistribution methodology for indexed REC procurements

IPA has requested feedback regarding the rollover and dynamic redistribution of RECs to reallocate unfulfilled REC quantities and maximize the number of RECs procured in each competitive procurement event.

█ supports maximizing the procurement of RECs within each competitive procurement as this approach will allow the state to take advantage of shovel-ready projects and to progress toward meeting the state's decarbonization goals. To ensure that the agency has sufficient flexibility to respond to the bids it is presented in each procurement event, █ recommends that in lieu of establishing rigid requirements for rollover and redistribution of unfilled RECs, the agency simply report on the amount of RECs that were filled, redistributed, or rolled over as part of the procurement results posted.
